Seminar on Unmanned Systems

Unmanned Systems are playing an increasingly more critical role in modern warfare. Unmanned systems are currently deployed for airborne, ground, and undersea applications. The benefits to Northrop Grumman's war fighters are already being realized in terms of safer tactics and operations using robotic systems. Northrop Grumman, as the leader in development of this rapidly evolving technology, presents this seminar providing an overview of the history, current capabilities, and future plans for unmanned systems.
